AutoCAD

The graphical user interface (GUI) in AutoCAD is divided into three areas: Menu bar, Toolbars, and Ribbon toolbar. They are all stored in one binary file which can be modified by any registered custom toolbox. Menu bar and Toolbars can be replaced as needed. In AutoCAD 2010, the Ribbon has also been split into its own category in the Edit tab. Actions In AutoCAD, actions can be implemented in three basic types: Callback (shortcuts, macros) Operator (operator driven macros) User-defined Callback Callbacks are shortcuts that can be registered to perform actions or trigger a macro. An action can be associated with a single or multiple callbacks, and they are triggered by the keyboard shortcuts or by the macro-triggered windows message. With the release of AutoCAD 2011, callbacks can be associated with a path, or be applied to a group of objects. Macros Macros are pieces of code, or scripts, written in AutoLISP. They can be placed in one of several types of library files, the most common being "macro desktop", or the "user desktop" directory, depending on the settings in the "Desktop and My Documents" directory. Macro libraries can contain either a simple AutoLISP script or a compiled version of AutoLISP. The compiled version of AutoLISP is known as "plain" or "compiled". Macros are not called automatically, but only when the user selects them from the Macros tab. Operator macros Operator macros can be triggered by an operator or by a windows message. They are written in AutoLISP. User-defined macros Macros can be defined by the user and can include any of the available tools and options available in the menus, but they are not compiled by AutoCAD. They are similar to user macros, but are not stored in a library file, and so they can not be shared among multiple users. Macros can be saved as two types: "local" and "remote". "Local macros" are stored in a temporary directory and are only saved on the local machine, while "remote macros" are stored in a directory on the remote machine, accessible from any user's machine on the network. They are not saved automatically and are only available to the currently logged-on user. To save a macro, open it and save it. a1d647c40b

Gearino (right) watch an employee at the automated brew system pour a bucket of malted barley into the grain mill. Photo by Shara Adkins One of Skyline Brewing Company's largest investments in the last decade has been the implementation of an automated brewing system. It's the first in Portland, and the first to use automation in the industry. The one on the left is the primary system, and the one on the right is a backup. Photo by Shara Adkins One of the original co-owners of Skyline, Pete Conyers, now the brewery's head brewer, began implementing the system, originally for experimentation and education. Conyers estimates that he's poured or brewed 1,000 gallons of beer in the past two years, and has been able to use the automated system to change ingredients and see how that affects the beer. The brewers have also been able to take a "day off" on several occasions when they've left the brewery to go home to make dinner, and have the automated system still operate the brewhouse when the team is back on-site in the morning. "I have poured a couple of beer that day, and I was like, 'You're not going to believe this!' It was actually really good," said Conyers. "It's really cool to be able to be home and still be able to work," he said. Conyers got the idea for the automated system about 15 years ago. A Portland business partner had a science background, and Conyers had a chemistry background and had worked as a chemist. When Skyline hired Conyers as head brewer, they started talking about the need to automate the brewhouse. The system

What's New In AutoCAD?

Norman Scientific Select is now available. Upgrade from any prior version and enable many new features, including cloud integration and a built-in collaborative environment. (video: 2:17 min.) Project plans can now be exported as PDFs from the Raster/Vector Properties window. (video: 1:54 min.) Draft and part layers can now be nested. (video: 3:21 min.) Relative dimensions and axes are now displayed as vectors in the Raster/Vector Properties window. (video: 2:17 min.) The Object Browser can now display relative dimensions and axes. (video: 1:30 min.) Import new dimensions from PDFs. Send the dimensions to the drawing, and Autodesk will import the values directly from the drawing's dimensions. (video: 2:34 min.) Two new methods for creating an area fill: AutoFill and Fill with Outside Features. (video: 2:16 min.) Workspace improvements: Work with 2D drawings in 3D. Create 3D objects directly from 2D drawings, and vice-versa. (video: 2:55 min.) Simplify area operations by creating ellipses and circles. (video: 2:55 min.) Change the endpoints of circles or polylines to a number of options. (video: 2:54 min.) The Polyline workspace now supports editing and options for polylines. (video: 1:48 min.) Linear drawing tools on the drawing canvas are now context-sensitive. (video: 2:15 min.) Rotate, Trim, Copy and Rotate/Trim tools can now be used on 2D and 3D drawings. (video: 2:32 min.) Connecting lines can be cleaned and improved to help prevent misalignment issues. (video: 1:54 min.) Dimension styles can now be applied to existing polylines, and locked to prevent changes. (video: 2:06 min.) Copy and paste drawings in 2D and 3D drawings. (video: 2:55 min.) CADn annotation tools can now be used on other drawings. (video: 1:52 min.) CADn annotations now support minor edits, making them easier to use for reviews.
