The Client/Server SQL Elite Statement and Stored Procedure Generator is a tool for generating SQL statements and stored procedures. It addresses all four categories of SQL statements (Select, Insert, Update and Delete) and permits them all to be seen simultaneously and in the same context. It is a fast (sometimes as fast as a line of code), easy to use (doesn't require retyping of either SQL statement or stored procedure), simplistic, yet powerful and comprehensive application for generating SQL statements and stored procedures. These days, many applications are sending data

out using multiple connections such as: a connection for DDL, another for DML (data modification), another for transport of data, yet another for receiving updates, and more. This leads to complications when trying to troubleshoot applications. This book simplifies the complicated, explains when each is necessary, how to check for and tune each connection, and how to troubleshoot any problems. This book is designed to be used in conjunction with a real-world example program. To assist in the readability of this book, the names of all function source code and component names are explained inline in the text. There are those of us who have a love affair with SQL expressions. When I know where to put a subexpression and when to use ORDER BY or GROUP BY, I can easily make my sentences sentences. Those are the people that know what ORDER BY is. This book is for the other people in the second category.
