Some people feel that Photoshop is difficult to learn, but today there are many tutorials (books, e-books, magazines, and more) that can show you how to make your own graphics. Photoshop Elements Adobe Photoshop Elements offers easy file conversion, the capacity for using layers for multiple alterations, and much more. It's not only for beginners, but for all levels of users, beginning and advanced. Photoshop also enables effects like soft light and shadows with some blurring and sharpening. For example, Figure 6-11 shows an example where the PSD file was opened and a fuzzy clone stamp used. **Figure 6-11: Clone stamping.** Photoshop CC Photoshop CC is a stand-alone version of Photoshop that offers large improvements over the older Photoshop. In particular, it has real-time 3-D capabilities, creating an illusion of depth in layers. In addition, you can also do photo editing in grayscale or without grayscale. It also has beautiful effects with the Liquify tool, and it includes a rich collection of brushes, tools, and effects. If you work with a lot of text, remember that Photoshop CC's autocorrect feature enables you to effortlessly create a large number of phrases with just a few clicks. A good tutorial can be very helpful when getting started with Photoshop CC. The individual chapters of the book Photoshop Elements 10 For Dummies, by Toni Bernette (Wiley), can give you a good idea of what you can accomplish with Photoshop Elements 10. Illustrator Illustrator is a drawing program that was originally designed for creating drawings. Today, it has evolved into a highly useful tool for creating or editing high-quality graphics for use in print or in the Internet. It uses vector graphics in a raster image. Vector graphics are geometric shapes that are scalable, which means that they look sharp at any size you need. The bits of Illustrator — strokes, paths, and effects — can be resized as well as moved and reordered. Illustrator, like Photoshop, enables you to add color with the color palette and apply many effects such as shadows, blurring, and the soft light effect. You can also use a Curves adjustment to create the soft light effect. If you are looking for a flat look with curves — rather than softer colors created with the Curves effect — try using Photoshop. Illustrator can create

lines look perfect. Place text on your images with four different methods. If you're looking for a simple digital photo editor, this app will change the way you feel about your photos. You'll learn how to: Reduce the noise in images Reduce the noise in images Create new images How to reduce noise in digital photos is a process of improving the quality of a digital image. The noise is a kind of pixelation that can make an image look fuzzy and noisy, especially if you're attempting to create an image with a fine level of detail. The easiest way to reduce the noise is to reduce the ISO setting on your camera. Another way to reduce the noise is to use the Noise Reduction filter or Smoother filter in Photoshop. You can open this filter in the Filter menu on the Home tab. You can also find this filter in the Noise Filter section of the Adjust menu. I suggest you start with the Noise Filter because it is far quicker than the Smoother filter. Open your photo in Adobe Photoshop Elements and create a new file. Then open the Adjust menu. Choose Noise Filter and drag the Noise slider to the right and select "More". Open your photo in Adobe Photoshop Elements and create a new file. Then open the Adjust menu. Choose Noise Filter and drag the Noise slider to the right and select "More". Open the Noise Filter and drag the Noise slider to the right. Then, click on the "More" button on the right. You will see the two options for Noise Reduction: Levels: This option makes the noise reduction go to the highest level possible. You can adjust the settings for various levels to see how the noise reduction works for you. Pe 05a79cecff

Q: Is it possible to remove a single JSON property from a JSON object? I'd like to remove a single JSON property from a JSON object and keep the rest. For example: {"x":{"a":1,"b":2}, "y":{"a":3,"b":4}, "z":{"a":5}} into: {"x": {"a":1,"b":2}, "y": {"a":3,"b":4}, "z": {"a":5}} Is there a simple way to do this? A: What you want is not possible in vanilla Javascript, as JSON has no concept of "removing" properties. However, if you have the option of using a library like JSON.stringify(myObject,...) and JSON.parse(myString), then you can use string methods to accomplish this. Here is a snippet demonstrating this: const obj = {"x":{"a":1,"b":2}, "y":{"a":3,"b":4}, "z":{"a":5}}; const stringified = JSON.stringify(obj, null, 2); const parsed = JSON.parse(stringified); console.log(parsed); I wouldn't recommend trying to accomplish this sort of thing in vanilla JS, as it opens a huge security hole, assuming your JSON data is untrusted code. That said, if your data is from a client or web service, you may indeed be able to accomplish this without using any libraries, but you would need to write a custom handler for any such requests. But ultimately, the correct approach is using libraries like JSON.stringify and JSON.parse to work with your JSON data. /\* Copyright The containerd Authors. ### What's New In?

The 32-year-old British road cyclist added another prestigious prize to his resume when he took the Big Three stage at the Vuelta a Castilla y Leon de Aragón (2.3) in Spain on Thursday. After sprinting away from the leading group on the final climb, the peloton was then caught by Contador and Ferrer. Contador had attacked to take the lead but was eventually brought back. The Spaniard matched Ferrer for pace in the final 90 kilometres but a series of attacks from the Basque climber were enough to secure the win ahead of Ferrer, who had won the opening two stages of the race this morning. The Spaniard is building up to the Giro d'Italia on 11 May, where he could well win the maglia rosa. He currently trails Contador by five points, with Contador having won three of the previous four races. Contador set the pace on the final climb yesterday and his teammate, Spaniard Mikel Nieve, got close to Contador on the final 7.4-kilometre stretch of the mountainside. Today's win takes Contador back to the top of the world rankings, with Spain's Sam Sanchez following on 13 points and Nieve dropping to second place with 15 points. Andy Schleck, second overall, was third in the race, 40 seconds back on Contador. He has now slipped further behind his brother and he lost 15 minutes in the stage win to Contador on the final climb. Schleck is just one point behind his brother and has plenty of chances to regain the lead in the race. Contador has been sitting in third overall for a week now, but he has made no moves in the time trials. He is not at risk of losing time but will undoubtedly be highly motivated. Contador was not helped by the fact that the four team cars leading the peloton moved off early, forcing some riders to go alone on the front. They should be the perfect springboard for the Spaniard's first attack. Juan Antonio Flecha took the win and also recovered 10 minutes on the previous stage winner, Roman Kreuziger. The Spanish rider is fifth overall and is tied on 46 points with Ferrer and Sanchez. Other riders who improved their position were Richie Porte, who is now sixth overall and is just half a minute off the lead, and Alejandro Valverde, who is now seventh overall and is
