a. containment features: if containment features or barriers are needed to control the migration of radionuclides and other hazardous constituents, the licensee shall submit a written, site-specific reclamation plan that is consistent with and supported by the recommendations of the state and/or local officials who have been actively involved in the development of the reclamation plan; b. liquid handling and/or consolidation: if soil or groundwater recharge is proposed, the licensee shall submit a written, site-specific reclamation plan that is consistent with and supported by the recommendations of the state and/or local officials who have been actively involved in the development of the reclamation plan; c. pile construction: the licensee shall submit a written, site-specific reclamation plan that is consistent with and supported by the recommendations of the state and/or local officials who have been actively involved in the development of the reclamation plan; and 6a(4) the commission may, upon written request of the licensee, extend the compliance period by a period of up to sixty (60) days for good cause shown, provided that the initial compliance period is at least five (5) years from the date the license is issued and that the extension is granted prior to the end of the compliance period. the request for the extension must be made to the commission prior to the expiration of the initial compliance period. if the licensee files a request for an extension, the licensee shall submit the following information to the commission:

Krypton Suite License Key

3.5.3.2 under the monitoring programs established pursuant to paragraph 3.1, the licensee shall identify, characterize, and quantify the occurrence of hazardous constituents in the uppermost aquifer. for each such occurrence, the licensee shall identify the source of the occurrence and the contaminant. if it is determined that a particular contaminant is migrating from a milling or tailings processing area into the groundwater, the licensee shall propose for the commission's approval the concentration limit to be used in the groundwater monitoring program. if the commission determines that the contaminant is migrating, the licensee shall propose for the commission's approval the schedule for annual monitoring. this annual monitoring program must be submitted for commission approval when the licensee submits the state environmental regulatory agency's final decision on the facility's permit application.

3.5.4.2 in accordance with the state's adoption of the us environmental protection agency's hazardous waste management system (sw-846) and its amendments, the licensee must be provided with copies of the state's adopted plan and copies of permit applications or other supporting documents for all disposal units at the site. once the closure plan is approved, the commission may order the licensee to commence the initial emplacement of the final radon barrier. in the case of an all-in-one design that has been approved, the commission may order the commencement of the initial emplacement and completion of the initial radon barrier, and may order the licensee to also initiate the final emplacement of the final radon barrier. the commission may order the licensee to complete the final emplacement of the final radon barrier before issuance of the license. in these cases, the commission will specify the time period during which the licensee will be required to complete the final emplacement of the final radon barrier. the commission will specify the time period during which the licensee will be required to commence final emplacement and finish the final radon barrier when the licensee's closure plan is approved. 5ec8ef588b
