The Amazon EC2 M1 Mac price tiers are defined by the same definition used for M3 instances, but include the capability to run up to the maximum allowed number of vCPUs and compute power on an M1 Mac instance. The M1 Mac instances are available only in the General Purpose Instance (G2) and Advanced Technology Attachment (A1) sizing options. New in this release of Director, you can use an EC2 instance to host an interactive voice response (IVR) console. For example, you can host a B2B customer-facing IVR application within your Amazon Elastic Compute Cloud (Amazon EC2) environment. With voice access to your contact center, the application enables your agents to respond to customers in real-time. Amazon EC2 instances are built on the Apple Mac mini computer, with Intel Core i7 processors, and are powered by the AWS Nitro System. You can choose from Mac instances that can run on macOS Mojave (version 10.14), macOS Catalina (version 10.15), macOS Big Sur (version 11), and macOS Monterey (version 12) as Amazon Machine Images (AMIs). To get started with Amazon EC2 Mac instances, see the Amazon EC2 User Guide. PowerPC Mac instances are built on Apple Power Mac mini computers, featuring Intel Core PowerPC 970 processors, and are powered by the Amazon EC2 Nitro System. You can choose from two Mac instances that can run on macOS Mojave (version 10.14), macOS Catalina (version 10.15), macOS Big Sur (version 11), and macOS Monterey (version 12) as Amazon Machine Images (AMIs). To get started with PowerPC-based Mac instances, see the Amazon EC2 User Guide.
