If sharing work is important to you and you're comfortable with the new tools, then maybe the newest version of Photoshop may be a good option for you. There are still, for example, several common photo editing tasks that are not yet performed, though many of them are really easy to perform. I recommend taking the free trial to judge for yourself. – Use select all, copy, or cut/paste in Photoshop? All of the above are available in Lightroom 5. – Faster access to technical settings – Doing things with even more granularity – To make the HDR Preset panel more intuitive – A redesign of the photos panel – New features for Composite, Adjustments, and Lens Correction – New features for the Hue/Saturation/Luminance panel – The latest Photoshop version, in CS6, does include many new features. A Briefing feature is a welcome addition. If you're a seasoned photographer, you'll probably be aware of the Leica Institute of Photography's A Briefing for Photography book. LIP's overview gives a general idea of the benefits, but is of little help to those who have only a cursory knowledge of how photography works. Another huge problem with the iPad Pro is the file system. The OS X file system is great, and you can mount your iPad Pro as an external drive on your desktop or laptop. However, that's not an option with the iOS file systems. The iPad Pro's gigantic storage is great at keeping so much power in its battery – but what if you run out of battery? If you turn the iPad Pro off, and then charge it up in the morning, and you find yourself in your email, or in a non-battery-powered position, it's pretty much useless. If you've set up the iPad Pro to run completely offline, then you can download images, but not edit. It seems impossible that Adobe didn't figure how to do this.
