Your Own Webradio

Start the program on your own server, visit a webradio from the server, open a StreamConverter file on your own webspace and select the webradio or the autoplaylist from your own webradio! Just that easy! You can create many Webradios and play them with StreamConverters! Now every internet user with a medium-speed connection (for example DSL) can provide an internet radio station which broadcasts automatically or on the base of a playlist. The Listeners must start a StreamConverter but then the format is compatible to every other webradio. The StreamConverter can also receive instant messages from the webmaster needs a webspace with FTP-Upload. Before he can edit the content-base or the playlist, the FTP access has to be configured. The content elements have to be uploaded before the playlist or the autoplaylist can be edited. The radio consumers must load the StreamConverter from the homepage of the station, start the program and open webradio.m3u. Give Your own Webradio Description: Start the program on your own server, visit a webradio from the server, open a StreamConverter file on your own webspace and select the webradio you want to play. After start, play the webradio or the autoplaylist from your own webspace and play them with StreamConverters! AIM E-mail Address of webmaster:... What's New in the?

This is a server program which is used for internet radio stations. It has a nice and intuitive user interface and it is compatible with every other internet radio station. The source code is available for the programmers. It is written in Java. Android SensorManager The Android SensorManager class provides a way to access the accelerometer, magnetometer, or the light sensor. As with the Device and Display classes, you can use the SensorManager class to start, stop, and reset sensors. Note: The Java documentation for SensorManager has the accelerometer and magnetometer sensors mixed up. Accelerometer is the accelerometer, and magnetometer is the magnetometer. There is also an active-light sensor. SensorManager is synchronized with the application's main thread should be done in the onSensorChanged() method. Parameters: sensorType the sensor to use. Either SENSOR TYPE ACCELEROMETER or SENSOR TYPE MAGNETIC FIELD must be specified. Returns: false if the sensor could not be added. onResume() Attaches to the sensor hardware and starts listening for sensor events. OnCreate() Attaches to the sensor hardware and starts listening for sensor events. Examples of where to use the SensorManager include: // When the user drags the window, we want to disable dragging when the window is created on Create() { mSensorManager.registerListener(mSensorListener, mSensorListener) } mSensorManager.getDefaultSensor(Sensor.TYPE ACCELEROMETER), SensorManager.SENSOR DELAY NORMAL); } When you register a sensor listener with the SensorManager you can listen for events from the sensor that are reported by the system on its own timing. You can also set an interval to check the sensor for events. Registering a sensor listener When you want to listen for sensor events, you register a listener for them. You can register a listener using either of these two methods. Method 1 public static void registerListener (SensorManager, int sensor, SensorListener listener, long interval) You specify the sensor and the listener by passing in the sensor and listener, and the interval between checks for sensor events. Note: The parameter "interval" is the number of milliseconds that must pass before checking for a sensor event. If the sensor event does not happen within the given interval, the listener is not notified. When

System Requirements For Your Own Webradio:

* Microsoft Windows 8 / 8.1 / 10 * Graphics Card: NVIDIA GeForce GTX 560 or AMD HD 7950 * Intel Pentium 4 2.3 Ghz or higher * RAM: 512 MB * DirectX: Version 9.0c * Mouse/keyboard * 1024 X 768 display resolution Notes: The game contains 10/15 minute versions of all tracks which can be selected from the main menu. The 10 minute version of the track is used in the Track & Field Tournament mode. The 15 minute
